

Document	Software Components	Release	17/08/26 V1.0
Project	BRN WMS	Project code	200-WMS-26-001-00
Project period	05/01/26–24/08/26		

1. Purpose

The example reference package has no filled Software Components document; this work product's content and format were not prescribed by an example and are defined here from the current codebase. This record lists the delivered software components (business-logic classes, real-time/scheduled services, and application areas) as the inventory referenced by the Traceability Record and Software Configuration. Unit IDs match the Software Unit table in the Software Design document.
